To whom It may concern,

It is our pleasure to recommend Thomas Radonic for admission to your institution. We had the opportunity to evaluate Thomas while supervising his work as a summer co-op student in the Life Sciences division at TRIUMF. We were impressed by Thomas' attitude and diligence displayed during his time with us. Thomas is very bright and quite motivated. He is a quick learner and has shown the ability to digest suggested readings of research and technical literature relevant to his work.

When assigned tasks, Thomas takes direction well, remains focused and is open to receiving correction. He displayed mechanical and software aptitude during the assembly and testing of electro-mechanical systems; including the ability to follow instructions and interpret technical drawings. He showed himself to be punctual, a conscientiousness record-keeper and responsible while handling laboratory chemicals.

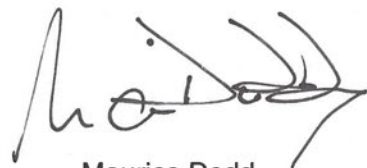

Mr. Radonic has demonstrated the ability to articulate information and ideas in both verbal and written form. He produced excellent reports, summarizing his work with surface analysis of machined parts and leak testing of mechanical seals. Thomas conducted himself professionally with staff and was able to communicate effectively with those from different disciplines of science and engineering.

We would heartily recommend Mr. Radonic and are confident that he will be a high-performing student at your institution. Please let us know if you have need for additional information about this outstanding young man.

Sincerely,

Brian Hook
